

Science Safety Rules

- ☑ Respect your teacher and classmates as well as the lab itself. Remember that science materials are tools, not toys.
- ☑ Listen to directions and follow them carefully. If you are confused about the procedure for an experiment, raise your hand and ask for help.
- ☑ Stay in your seat unless you are directed to do otherwise. If you do have to move around the room, do so slowly and carefully to avoid spills or accidents.
- ☑ Don't taste, touch, or intentionally inhale anything unless you are asked to do so. Wait to explore until you are given directions.
- ☑ If needed, wear goggles to protect your eyes. If you do get something in your eye, rinse with clean water immediately.
- ☑ Clean up after each activity and dispose of materials properly. Let your teacher know immediately if you break glass, spill something, or if someone gets hurt.

Have fun and stay safe!
